**CAUTION!! BRAND MATCHING CAN BE DANGEROUS:**

This chart lists products that fall within the same general groupings. Some products are available in multiple viscosity grades, such as those in the first four columns, so be sure to consider that as well. Absolute comparisons of competitive products are nearly impossible, and the names or specifications can change at any time. The author does not assume any responsibilities for inaccuracies in the chart or any resulting problems. Always refer to the equipment owner's manual to confirm the selected product, or contact Andy Schneider (X6309).
